Post-Quantum Cryptographic Bounds and Lattice Theorems

Author: Dr. Alexander Vance, Cambridge & Oxford Press

Abstract: Classical integer factorization primes face asymptotic decay.

# Section 2: Lattice-Based Reductions - Page 2

Shortest Vector Problem (SVP) in dimension n = 512

Theorem 2.1: IND-CCA2 security is preserved under chosen ciphertext attack.

# Section 3: Empirical Benchmarks - Page 3

Empirical evaluation of 10,000 key exchanges demonstrates 0.4ms latency.

Conclusion: Migration to ML-KEM standards is theoretically complete.
